

Course Content

Profession and aesthetics knowledge in interior design

- Theories and principles of Design
- Understanding human needs
- Working with technical aspects
- Relationship between global awareness and interior design
- Design with function and forms
- Hand drawing skills for development process

Enhance your design ability with the powerful tools for Interior Design

- Techniques of working drawings, realistic 3D image presentations
- Virtual walk through a building
- Create the design concepts in the virtual environment quickly

- Intelligent modeling module among 2D drawings and 3D models creation
- Build up your own library for future use as the built-in design templates
- Create furniture models with knowledge in 3D commands
- View your "ideal design" from any angles in JPG or BMP pictures
- Get the "real" scene with 3D panoramic view
- Produce a virtual walk through animation (video) and photos with 3D look-and-feel
- Simple platform for running file based on the AutoCAD® technology with simplified operation
- Assign and adjust different light effects easily for objects
- Work with built-in templates for direct application to speed up your design process
- Provide the automatic settings to define parameters of many materials for direct selection

Prospect of your career in interior design

This course will enhance the capabilities of participants on interior decoration for the home and office. You will learn the powerful 3D rendering tools and practical design skill in interior design. It aims to equip participants with the necessary knowledge in combining creativity with practical design solutions to create unique and powerfully designed spaces. Participants can acquire the skill set and enhance their design abilities with the new technology within a short period of time.

Learning the effective tools and knowledge for interior design could be a short cut toward working in the design industry, home design stores and construction companies. Upon completion of this course, participants not only have a thorough and solid understanding of professional skills in computer 2D and 3D drawing, but also up-to-date knowledge in the field of interior design industry.
